## **DETAILED ACTION**

### ***Response to Amendment***

The following is in response to the applicant's arguments and amendments filed 1/19/06.

The examiner has considered the applicant's arguments, but is not persuaded in removing the prior art rejections.

The applicant argues that the prior fails to teach or suggest the initial mixing concentration of the oxidizing agent being less than the target concentration required for the process.

However, in continuous processes the concentration of the oxidizing agent would vary. For example, the prior art continuous mixing processes that regulate the concentration of oxidizing agent would have concentration values both above and below the target concentration. Hence the instant case and in the prior art use a concentration detector for measuring the oxidizer concentration and would at some point in the process have a concentration below that of the target concentration. As such, the prior art clearly reads on the applicant's limitation of having an initial concentration set below the target value.

### ***Claim Rejections - 35 USC § 102***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Previous rejections over claims 9-12 are maintained for those reasons set forth above.

### ***Conclusion***

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
